

Contraceptive Expectations and Attitudes Among Bulgarian Teenagers

T. Cheren

Family planning Association, Bulgarian.

Sexual activity and the contraception used among the teenagers in several high schools in Sofia have been studied. Slight decrease in the age of first intercourse has been noted. Statistic reliable increase in the condom usage rate, oral hormonal contraception rate and a tendency towards increase in the spermicidal usage rate has been observed. Expectations of adolescents regarding different types of contraceptive methods and their realization have been analyzed.
